### **DETAILED ACTION**

1. This office action is responsive to the following communications: the Application filed on March 24, 2005, which is the US National Stage Application of PCT/DE2003/002932, filed on September 3, 2003.

2. Claims 14-28 are pending in the present application. Claims 14, 21, 28, are independent claims.

### ***Priority***

3. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. DE 10244977.5, filed on September 26, 2002.

### ***Information Disclosure Statement***

4. The information disclosure statement (IDS) submitted on March 24, 2005, is in compliance with the provisions of 37 CFR 1.97 and has been considered by the examiner.

### ***Allowable Subject Matter***

5. Claims 14-28 are allowed.

6. The following is an examiner's statement of reasons for allowance: regarding independent claims 14, 21, 28, the prior art fails to teach the programming of a memory module through a BSCAN register that generates a write enable signal that activates or deactivates the writing operation directly based on instructions fed to update flip-flops found in BSCAN register. Independent claims 14, 21, 28, are therefore deemed

Art Unit: 2824

allowable over the prior art. Claims 15-20, 22-27, are dependent upon the allowable independent claims, and are therefore also deemed allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jones et al. (5,805,794), Jacobson et al. (5,841,867), Tang et al. (6,356,107), Krause et al. (6,937,493), and Gomez (US 2003/0187629) all teach other methods for programming memory modules using BSCAN technology.
